No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

BLyS is a member of the CC tumour necrosis factor (TWF) super family and induces B cell continuous and differentiation. The antibodies of the invention have CC proliferation and differentiation. The antibodies of the invention have CC cytostatic, immunosuppressive, immunostimulant, immunomodulatory, CC antirheumatic and antiAlDS activity and can be used in vaccines to continuous the expression and activity of BLyS. The antibodies bind to BLyS can so may be used to detect and quantitate the presence of BLyS in CC biological samples and may be used in this way to diagnose disease CC associated with aberrant expression of BLyS. They may also be continuous to treat diseases associated with aberrant BLyS expression CC administered to treat diseases associated with aberrant BLyS expression CC diseases, e.g. systemic lupus crythematosus, rheumatoid arthritis, CC immunodeficiency (e.g. common variable immunodeficiency (CUD) and CC acquired immunodeficiency syndrome (AIDS)). ABP4399-ABP4728 represent CC the antibodies and fragments of the antibodies described in the method confirmation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match 71.5%; Score 508.5; DB 2

This invention describes novel antibodies that immunospecifically bind to B Lymphocyte Stimulator (BLyS) polypeptides. BLyS is a member of the CC tumour necrosis factor (TNF) super family and induces B cell cumour necrosis factor (TNF) super family and induces B cell correct of the correct of the invention and differentiation. The antibodies of the invention have cytostatic, immunosuppressive, immunostimulant, immunomodulatory, antirheumatic and antiAlDS activity and can be used in vaccines to cinhibit the expression and activity of BLyS. The antibodies bind to BLyS in biological samples and may be used in this way to diagnose disease associated with aberrant expression of BLyS. They may also be conditionable and may be used in this way to diagnose disease cand activity such as cancer, immune, and autoimmune disorders and conditionable immunodeficiency (cytD) and conditionable immunodeficiency (cytD) and conditionable immunodeficiency (cytD) and conditionable inventionable inventionable inventionable inventionable inventionable in the method conditionable inventionable inventionable in the method conditionable invention and tragments of the antibodies described in the method conditionable inventionable inventionable in the method conditionable inventionable inventionable in the method conditionable in the method conditionabl

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match
This invention describes novel antibodies that immunospecifically bind B Lymphocyte Stimulator (BLyS) polypeptides. BLyS is a member of the tumour necrosis factor (TNF) super family and induces B cell proliferation and differentiation. The antibodies of the invention have cytostatic, immunosuppressive, immunostimulant, immunomodulatory, antirheumatic and antiAIDS activity and can be used in vaccines to inhibit the expression and activity of BLyS. The antibodies bind to BLyS and so may be used to detect and quantitate the presence of BLyS in
                                                                                                                                                                                                                                                                     16-JUN-2000; 2000US-212210P.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           밁
                                                                                                                                                    B Lymphocyte Stimulator (BHyS) polypeptides. BLyS is a member of the tumour necrosis factor (TNP) super family and induces B cell proliferation and differentiation. The antibodies of the invention have antirheumatic and antiAIDS activity and can be used in vaccines to inhibit the expression and activity of BLyS. The antibodies bind to BLyS and so may be used to detect and quantitate the presence of BLyS in associated with aberrant expression of BLyS. They are also be and may be used to detect and function the complex of BLyS and secondary to diagnose disease administered to treat diseases associated with aberrant ELyS expression diseases. e.g. systemic limits apythematical expression diseases associated with aberrant BLyS expression diseases. e.g. systemic limits apythematical expression diseases as a systemic limits apythematical expression of BLyS. They may also be and activity such as cancer, immune, and autoimmune disorders and diseases. e.g. systemic limits apythematical expression.
                                                                                       diseases, e.g. systemic lupus erythematosus, rheumatoid arthritis, immunodeficiency (e.g. common variable immunodeficiency (CVID) and acquired immunodeficiency syndrome (AIDS)). ABP43990-ABP47228 represent the antibodies and fragments of the antibodies described in the method
                                                       Sequence
                                                                                                                                                                                                                                                                                                                                    This invention describes novel antibodies that immunospecifically bind to

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Matches
                                                                               B Lymphocyte Stimulator (BLyS) polypeptides. BlyS is a member of the tumour necrosis factor (TNF) super family and induces B cell proliferation and differentiation. The antibodies of the invention have cytostatic, immunosuppressive, immunostimulant, immunomodulatory, antirheumatic and antiAIDS activity and can be used in vaccines to inhibit the expression and activity of BLyS. The antibodies bind to BLyS and so may be used to detect and quantitate the presence of BLyS in associated with aberrant expression of BLyS. The antipode disease administered to treat disease associated with aberrant BLyS expression and activity such as cancer, immune, and autoimmune disorders and alloys expression diseases. A carternic limine approximate the procession of BLyS and activity such as cancer, immune, and autoimmune disorders and diseases.
                            diseases, e.g. systemic lupus erythematosus, rheumatoid arthritis, immunodeficiency (e.g. common variable immunodeficiency (CVID) and
                                                                                                                                                                                                                                                                                                                                                                                         This invention describes novel antibodies that immunospecifically B Lymphocyte Stimulator (BLyS) polypeptides. This invention describes novel antibodies that immunospecifically bind to C BLymphocyte Stimulator (BLyS) polypeptides. BLyS is a member of the CC tumour necrosis factor (TNF) super family and induces B cell crown for the conversation and differentiation. The antibodies of the invention have CC cytostatic, immunosuppressive, immunostimulant, immunomodulatory, contribution and antiALDS activity and can be used in vaccines to contribute the expression and activity of BLyS. The antibodies bind to BLyS and so may be used to detect and quantitate the presence of BLyS in a conversate sypression of BLyS. They may also be conditionable and may be used in this way to diagnose disease campoistated with aberrant expression of BLyS. They may also be conditivity such as cancer, immune, and autoimmune disorders and conversated with aberrant BLyS expression conditionable immunodeficiency (e.g. systemic lupus erythematosus, rheumatoid arthritis, conditionable immunodeficiency (c.g. common variable immunodeficiency (c.g. systemic syndrome (AIDS)). ABP43990-ABP47228 represent the invention
                                                                                                                                                                                                                                                                                                                 Query Match

This invention describes novel antibodies that immunospecifically bind to CB Lymphocyte Stimulator (BLyS) polypeptides. BLyS is a member of the CC tumour necrosis factor (TNF) super family and induces B cell CC proliferation and differentiation. The antibodies of the invention have CC cytostatic, immunosuppressive, immunostimulant, immunomodulatory, CC antirheumatic and antiALDS activity and can be used in vaccines to cinhibit the expression and activity of BLyS. The antibodies bind to BLyS in CC and so may be used to detect and quantitate the presence of BLyS in CC alsociated with aberrant expression of BLyS. They may also be associated with aberrant expression of BLyS. They may also be cadministered to treat diseases associated with aberrant BLyS expression CC and activity such as cancer, immune, and autoimmune disorders and CC diseases, e.g. systemic lupus erythematosus, rheumatoid arthritis, CC immunodeficiency (e.g. common variable immunodeficiency (CVID) and acquired immunodeficiency syndrome (AIDS)). ABP43990-ABP4728 represent CC the antibodies and fragments of the antibodies described in the method of the antibodies and fragments of the antibodies described in the method of the antibodies and fragments of the antibodies described in the method of the antibodies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        RESULT 10

This invention describes novel antibodies that immunospecifically bind to CC Brymphocyte Stimulator (BLyS) polypeptides. BLyS is a member of the CC tumour necrosis factor (TNP) super family and induces B cell cct tumour necrosis factor (TNP) super family and induces B cell cc proliferation and differentiation. The antibodies of the invention have CC cytostatic, immunosuppressive, immunostimulant, immunomodulatory, can the antial can and antial DS activity and can be used in vaccines to compare the compare to th

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         cytostatic, immunosuppressive, immunostimulant, immunomodulatory, antirheumatic and antiAIDS activity and can be used in vaccines to inhibit the expression and activity of BLyS. The antibodies bind to BLyS and so may be used to detect and quantitate the presence of BLyS in biological samples and may be used in this way to diagnose disease associated with aberrant expression of BLyS. They may also be administered to treat diseases associated with aberrant BLyS expression and activity such as cancer, immune, and autoimmune disorders and diseases, e.g. systemic lupus erythematosus, rheumatoid arthritis, immunodeficiency (e.g. common variable immunodeficiency (CVID) and acquired immunodeficiency yndrome (BryS).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      antirheumatic and antiAIDS activity and can be used in vaccines to inhibit the expression and activity of BLyS. The antibodies bind to BLyS and so may be used to detect and quantitate the presence of BLyS in biological samples and may be used in this way to diagnose disease associated with aberrant expression of BLyS. They may also be and activity such as cancer, immune, and autoimmune disorders and diseases, e.g. systemic lupus erythematosus, rheumatoid arthritis, acquired immunodeficiency (e.g. common variable immunodeficiency (CVID) and the antibodies and fragments of the antibodies described in the method of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This invention describes novel antibodies that immunospecifically bind to CC B Lymphocyte Stimulator (BLyS) polypeptides. BLyS is a member of the CC tumour necrosis factor (TNF) super family and induces B cell CC proliferation and differentiation. The antibodies of the invention have CC cytostatic, immunosuppressive, immunostimulant, immunomodulatory, CC antirheumatic and antiAlDS activity and can be used in vaccines to inhibit the expression and activity and can be used in vaccines to CC and so may be used to detect and quantitate the presence of BLyS in CC biological samples and may be used in this way to diagnose disease associated with aberrant expression of BLyS. They may also be CC administered to treat diseases associated with aberrant BLyS expression and activity such as cancer, immune, and autoimmune disorders and CC diseases, e.g. systemic lipus erythematosus, rheumatoid arthritis, CC immunodeficiency (e.g. common variable immunodeficiency (CVID) and the antibodies and fragments of the antibodies described in the method CC of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Matches

This invention describes a novel polynucleotide (I) (and complements and hybridizable polynucleotides) comprising a contiguous nucleotide sequence coding for a human antibody with factor VIII specificity which has hemostatic activity. (I) is useful a primer or probe for detecting the presence of inhibitory antibodies directed against factor VIII. The
                                                                                                                                                                                                     New polynucleotide, polypeptide and antibody useful for diagnosing presence of neutralizing antibodies against factor VIII and for treatment of hemophilia A patients with these antibodies -
                                                                                                                                                                        Example
                                                                                                                                                                                                                                                                                                                                                                                                                                                                              08-MAY-1998;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This invention describes a novel polynucleotide (I) (and complements and hybridizable polynucleotides) comprising a contiguous nucleotide sequence coding for a human antibody with factor VIII specificity which has breasence of inhibitory antibodies directed against factor VIII. The polypeptides of the invention and the antibodies generated from them are useful in compositions for neutralizing factor VIII inhibiting antibodies in hemophilia A patients. This sequence represents the human anti-factor VIII antibody VH IT-2 protein which is used in the method
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               23-MAR-2000
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                AAY50950

tumour necrosis fa proliferation and cytostatic, immuno B Lymphocyte This invention

on describes novel antibodies that immunospecifically Stimulator (BLyS) polypeptides. BLyS is a member of tsis factor (TNF) super family and induces B cell n and differentiation. The antibodies of the invention
